

Q1 → Build a component with increment, decrement and reset button showing a running count. The decrement button should become unusable once the count reaches 0.

Ans1 →

```
import React, {useState} from "react";

function Counter() {
  const [count, setCount] = useState(0);
  return (
    <div>
      <h2> Counter: {count} </h2>
      <button onClick={() => setCount(count + 1)}>
        Increment </button>
      <button onClick={() => setCount(count - 1)}>
        Decrement </button>
      <button onClick={() => setCount(0)}>
        Reset </button>
    </div>
  );
}
```

Q2 - Todo List

Ans2 -

```
import React, {useState} from "react";

function TodoList() {
  const [task, setTask] = useState("");
  const [tasks, setTasks] = useState([]);
  const addTask = () => {
    if (task.trim())
```

Q 3- Login Toggle

Ans 3 - import React, {useState} from "react";

function LoginToggle() {

const [loggedIn, setLoggedIn] = useState(false);

return (

<div>

<h2> LoginToggle </h2>

{loggedIn ? (

<h3> Logged in </h3>

<button onClick={() => setLoggedIn(false)}>

Logout </button>

</>) : (

<button onClick={() => setLoggedIn(true)}>

Login </button>

)

</div>);
